Aug 2024 - Present

Frontend Developer - Next TS, Material UI.

SatuDNA is a Biomedical and Genome Science Initiative (BGSi) application that can be accessed through the SatuSehat app. SatuDNA provides pharmacogenomics data of the Indonesian population, which can be used by participants and healthcare providers to deliver precision medicine. To make pharmacogenomics data easily and securely accessible, SatuDNA collaborates with various experts and healthcare practitioners, such as hospitals and genomics databank institutions.

- Develop new website. Implement design from Figma. Create, develop and maintenance features needed.
- Build responsive and cross-platform websites, using programming languages as needed.
- Wrote highly maintainable, solid code for the software system, forming core framework and earning consistent praise from subsequent developers since initial version
- Worked with software development and testing team members to design and develop robust solutions to meet client requirements for functionality, scalability and performance.
- Coordinate tasks and priorities within the team, delegating responsibilities based on individual strengths and expertise.
- Review code and merge to master branch after developers push to Git repository.

Yaons - Freelance

Aug 2023 - Present

Frontend Developer - React JS, Tailwind CSS, Ant Design.

A platform for the government or donor agencies to digitally collect data on potential aid recipients, which can then be verified and analyzed for accuracy quickly. Additionally, this application will enable a more organized aid distribution process with a real-time tracking and reporting system, ensuring that aid reaches the right recipients.

- Develop new website. Implement design from Figma. Create, develop and maintenance features needed.
